BUBBLEGUM COLOR GEL

NEW! BUBBLEGUM COLOR GEL THE SPIDER GEL OF CRYSTAL NAILS.

Bubblegum Color Gel

DRAWING STRAIGHT LINES IS NOT A PROBLEM ANYMORE!

A long and stretchable decoration gel that can be stretched for long without tearing. Non-cleansing. You can combine with Chromirror, pigment and effect powders. The use of Skin Guard is recommended to remove material from the skin easily. Can be stretched with a nail art needle and also with brush. Also recommended for geometric and wrapped patterns.

Curing time in LED lamp: 1-2 minutes, in UV lamp: 2-3 minutes

ART GEL trend colors 2019 summer

NEW! ART GEL DENSE PAINTING GEL

The new generation of painting gels, for the lovers of decorations. Extremely pigmented, dense, non-cleansing painting gel that covers very thinly.

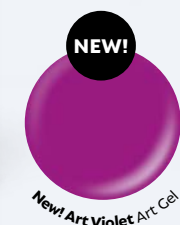

It does not flow or move away even after a long time. That means we can decorate for unlimited period of time.

You can use for the popular OneMove technique, for jelly and thin line paintings and also for contours. The gradients are more homogeneous with Art Gels and the finished nails are incredibly bright and more realistic.

It can be cured with UV and LED lamp as well. Along with the shades that have appeared so far now also in NEW Royal Blue and Violet colors!

Curing time: 3-4 minutes in UV lamp, 2-3 minutes in LED.

5ml –

X1 DRILL MACHINE

13+1 advice from CrystalNails for the hot days of summer!

If the temperature will be more than 30°C (it could be possible regarding to the past few years) we have to take care of our skin and eyes as much as our CrystalNails materials.

1. Some of our colored pigment changes their color by the laws of physics and chemistry: if they're under a strong UV-light for some time. So if your customer laying on the beach all day long, the color of their nails could be fade. In these cases if they come back to you to complain, they can be comforted by telling them, it's not the product is damaged, is just the way the colored pigments are acting on the sun.
2. The Cover Gels of CrystalNails contains UV filters and they help to the colors fade less.
3. Use hard gels in summer because in the heat of the summer everything could be more tender.
4. The builder gels have higher cure temperature in the summer and the could be inconvenient for some customers. It would be preferable if using materials made with low heat formula (e.g. Gelly Cover Pink Builder Gel, Cool Gel, Cool Remove Builder Gel). In these cases it would be preferable if we curing the nail periodically: after 3-5sec take out the hand from the lamp or after 5sec, the customers cure their hands in filtered light.
5. In case of using acrylic, use materials with slower cure time and make sure that the liquid has a normal, not too high temperature because if the liquid has a too high temperature it could cure too fast. The double-glazed bottle keeps the liquid in a low temperature. The acrylic cures faster in warm and damp room (e.g. salon), so try not to forget about these circumstances.
6. Use super hard Gelly Cover Pink Builder Gel or Rock Cover Light Gel for the nailbed extension and extra hard Pink Builder Gel for nailbed heightening.
7. In the months of summer our advice is that you use Gelly Cover Pink Builder Gel: very easily to forming a surface of the nail, it does not flow and it cures with much less heat. In special circumstances it can be put on the refrigerator between 2 customers about 10min.

NEW!

PROFESSIONAL ARTICLE

8. It could be good idea to use Xtreme Fusion AcrylGel. It could be shaping for a long time even if the temperature is high.
It doesn't flow to the fortifications, it doesn't cause burning feels only a little warm feeling.
9. For the summer we advise you to use Top Seal which is become softer when it's hot.
10. Keep your gel jars clean and closed! Watch out for the edge of the jar because the gel can be cured by accident by UV-ray of the sun. The best thing you can do is keep your jars in a drawer or a cupboard. If this problem would be permanent, it's better if you apply UV filtered sticker on your windows.
11. Use Spray Prep more often because of the dehydrating effect. In this way even the form will be more stiff, even in the most sweaty hands.
12. The materials softer in the heat so make sure that the gels or the gellac-s don't flow to the fortifications. We advise that make the C-curve in two layers in order to stay in their place for sure.
13. Do not keep your gels in the fridge too long because it could be stiff and you could not work with it for a while. Try to find a place in your salon where the temperature is not too high and not too low either.

+1

In the summer both the customers and the nail technicians go on the vacation so it could happen that your customer will come back to you later than the usual. Use the Compact Base Gel under gellac or any gel because this material provides you longer cohesive hold so your customer could „survive“ an extra few days.
